PROJECT REVIEW : MILESTONE PROJECT – 1

Date: 17-04-2026

PROJECT TITLE

Job Portal Management System

SDG: SDG 8 – Decent Work and Economic Growth

Presented By:

N . Dinesh Reddy – VTU25498 – Reg.No.23UECS0407

Courses Handling Faculty:

Dr . M Mageshwari - Assistant Professor

INTRODUCTION

1. Many students and job seekers face difficulty in finding suitable job opportunities due to scattered job information.
2. Employers also struggle to find the right candidates efficiently.
3. Traditional job searching methods are time-consuming and lack proper filtering and tracking.
4. There is no centralized platform to connect job seekers and employers effectively.
5. This project develops a full-stack web-based Job Portal Management System.
6. The system allows users to create profiles, upload resumes, and apply for jobs online.
7. Employers can post jobs, view applicants, and shortlist candidates.
8. The system improves efficiency, reduces time, and provides a centralized platform for recruitment.
9.

PROBLEM STATEMENT

1
2
3
4
5
6
7
8
9

Many job seekers depend on multiple platforms to find jobs, leading to confusion and inefficiency.

There is no proper system to track job applications and their status.

Employers receive applications manually, making it difficult to manage and shortlist candidates.

Lack of centralized data causes delays in hiring processes.

Manual handling of resumes and applications leads to errors and data loss.

There are no proper notifications for job updates or application status.

Therefore, there is a need for a centralized, automated, and web-based job portal system.

OBJECTIVE(S)

1
2
3
4
5
6
7
8
9

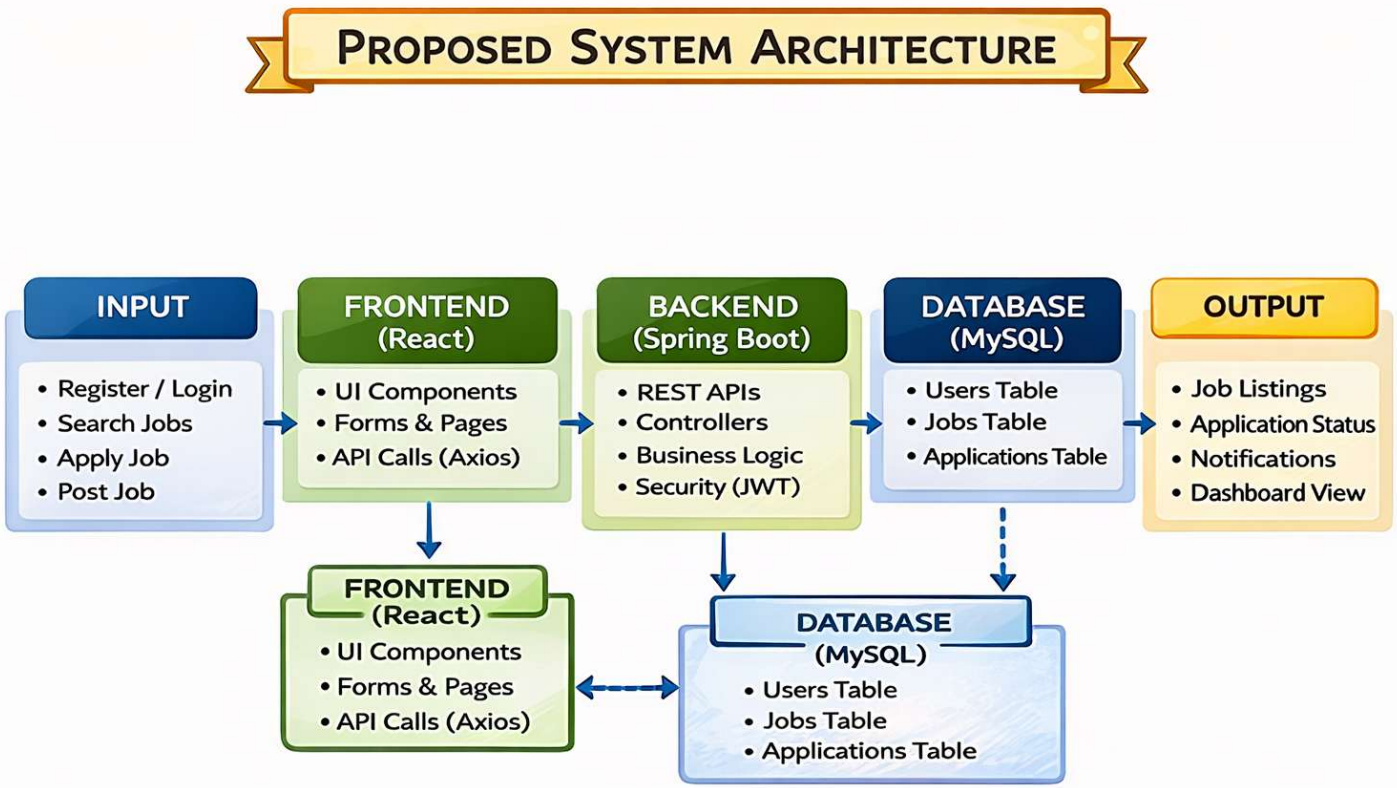
To design and develop a full-stack web-based Job Portal Management System using React, Spring Boot, and MySQL.

To provide an efficient platform for job seekers to search and apply for jobs and for employers to manage job postings and applications.

PROPOSED SYSTEM

1. The proposed system is a full-stack web application that connects job seekers and employers.
2. It provides secure authentication with role-based access (Student and Employer).
3. Users can create profiles, upload resumes, and apply for jobs.
4. Employers can post jobs, edit or delete listings, and manage applicants.
5. The system allows searching and filtering jobs based on location, skills, and experience.
6. Application status can be tracked by users.
7. All data is stored in a MySQL relational database ensuring consistency and security.
8. The system reduces manual effort, improves hiring efficiency, and provides real-time updates.

PROPOSED SYSTEM ARCHITECTURE



PROPOSED SYSTEM ARCHITECTURE

1

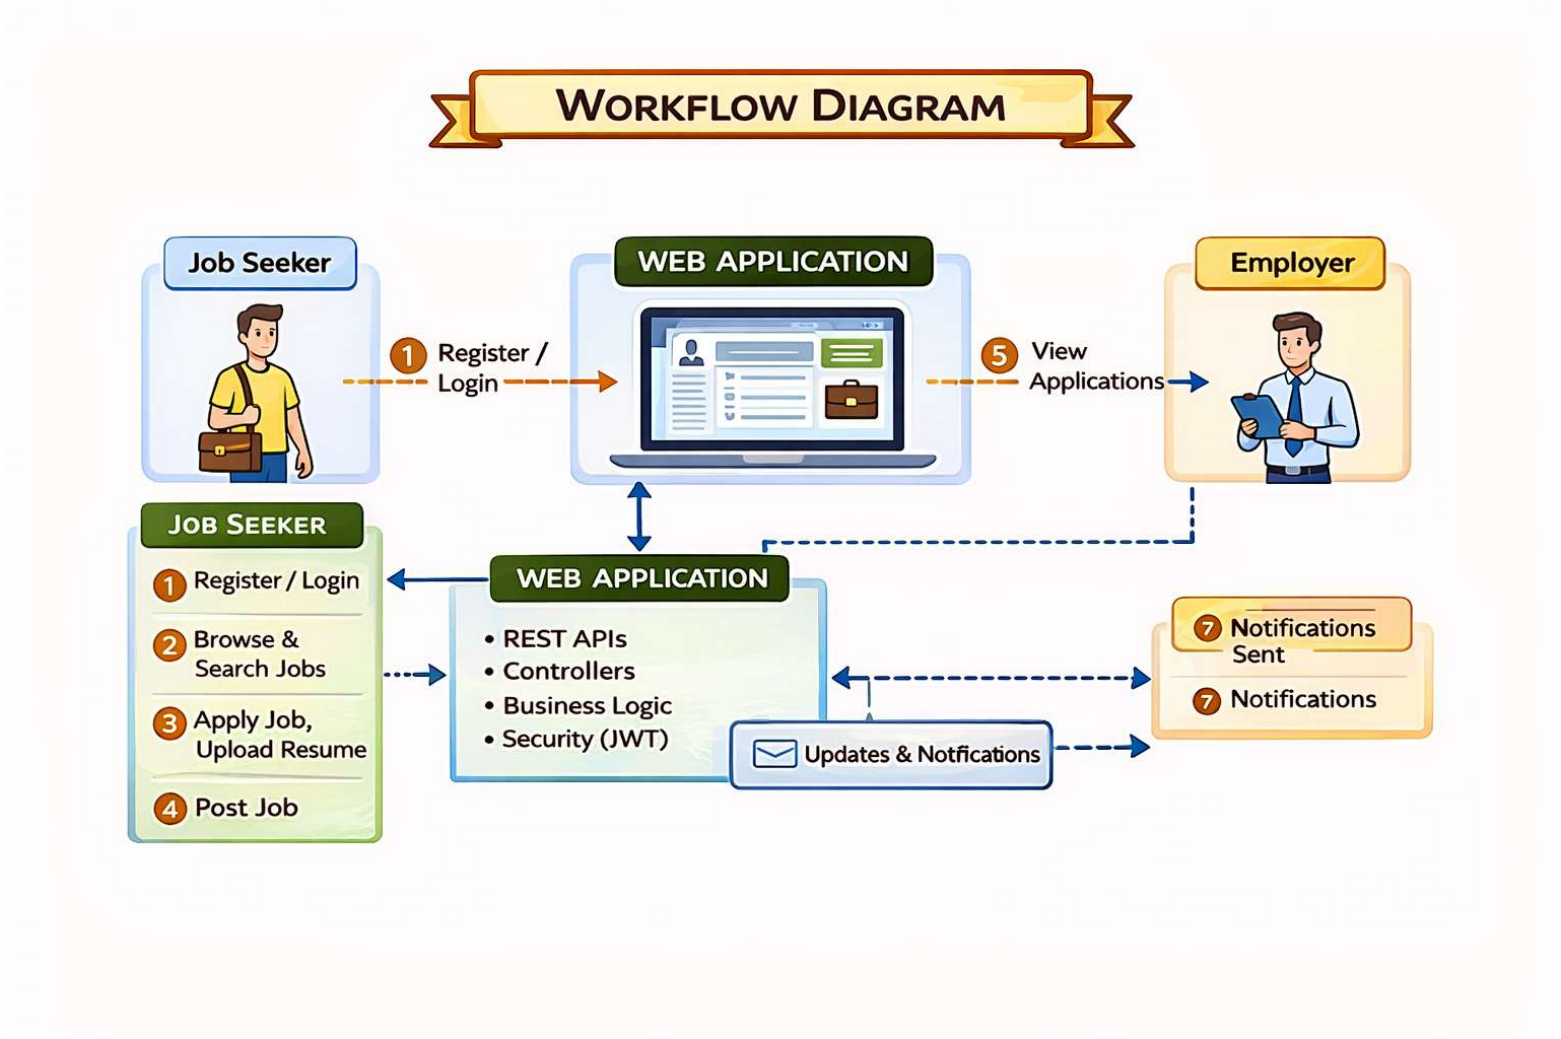
Input
Data given by user through web application
Sent using HTTP / REST API
Examples: Login, Add product, Update stock, Place order
Request goes to backend server
Processing
Done in Node.js / Express server
API routes handle requests
Controllers perform operations
Includes validation and authentication
Auth, Product, Stock, Order controllers
Database
MySQL database used
Stores system data
Tables: Users, Products, Stock, Orders
Server reads and writes data
Output
Server sends response to client
Result shown in dashboard
Examples: Login success, Product added, Order created, Stock updated

WORKFLOW



WORKFLOW DIAGRAM
Job Seeker
1 Register / Login
WEB APPLICATION

TECHNOLOGIES USED

1
2
3
4
5
6
7
8
9

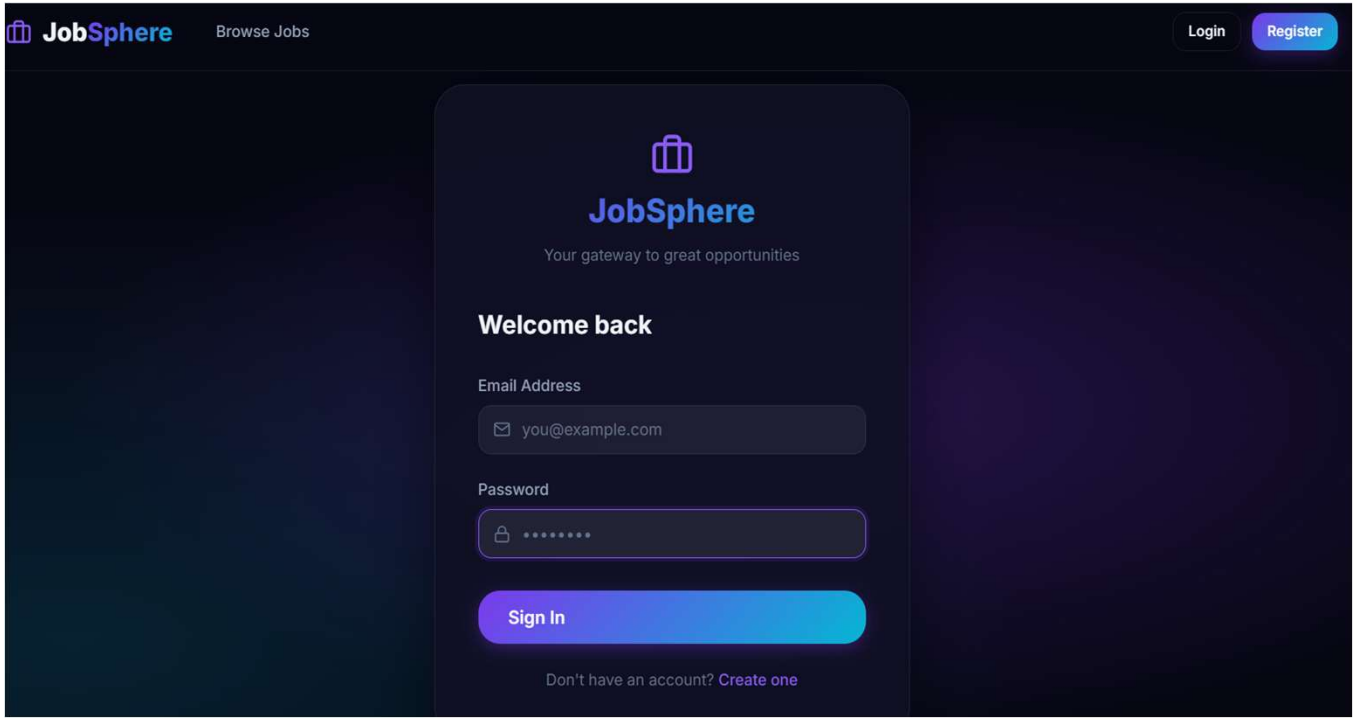
Frontend:
React JS
HTML
CSS
JavaScript
Backend:
Java
Spring Boot
REST APIs
Database:
MySQL
Tools:
VS Code
IntelliJ
MySQL Workbench
Requirements:
Minimum 4GB RAM
Windows/Linux OS
Web Browser

MODULE DESCRIPTION

1
2
3
4
5
6
7
8
9

Module 1: User Management
Handles user registration and login
Provides secure authentication
Module 2: Job Management
Allows employers to post, update, and delete jobs
Stores job details like title, salary, skills
Module 3: Job Search
Allows users to search and filter jobs
Displays available job listings
Module 4: Application Management
Handles job applications
Allows resume upload and status tracking
Module 5: Database Management
Stores Users, Jobs, Applications in MySQL
Ensures data consistency
Module 6: API Processing
Handles backend logic using Spring Boot
Processes requests and responses

IMPLEMENTATION SCREENSHOTS



Login Page
User enters email and password to login securely

ADVANTAGES & LIMITATIONS

1
2
3
4
5
6
7
8
9

Advantages

- Easy job search and application
- Centralized platform
- Saves time and effort
- Secure login system
- Efficient hiring process
- Real-time updates

Limitations

- Requires internet connection
- Dependent on server availability
- Limited features in current version
- Needs backend integration
- Data backup required

Thank you
